

## ***Installation***

It is **highly recommended** that you backup your entire S90ES system to a S90ES-compatible USB storage device before proceeding. Even if you haven't made changes to the factory settings, creating a FACTORY.S7A is recommended since it causes less impact than a full factory reset when restoring your settings. Refer to the S90ES Owner's Manual for instructions on how to perform this procedure. It is also recommended that you have the latest firmware in your synthesizer before installation.

Installing the entire Piano Realism Pack will store new voices into USER2 (Original factory voices in USER2 bank are duplicates that can be found in other banks). There will be new Performances in the first 16 positions of group "A", and new MULTIs in the first 16 positions of group "C".

To install the Piano Realism Pack, follow these steps:

1. Copy the PRP.S7A to a S90ES-compatible USB storage device using a computer.
2. Insert the USB storage device into the S90ES.
3. Press the [FILE] button.
4. Press the [LOAD] soft button.
5. Select TYPE=All.
6. Leave "without System" unchecked to load the library's Utility settings (includes Master EQ).
7. Select PRP.S7A.
8. Press the [EXEC] soft button.

Note 1: After this installation procedure, the following MIDI settings, among others, may have changed from the settings that you had previously: Local Control, MIDI In/Out.

You can restore these settings by pressing the [UTILITY] button, followed by the [MIDI] soft button. Then press the [▲] and [▼] buttons and use the jog wheel to change the values as necessary.

You can also load individual voices, Performances, and MULTIs as desired (Refer to the S90ES Owner's Manual for details).
