

## ***Installation***

It is **highly recommended** that you backup your entire S90XS system to a S90XS-compatible USB storage device before proceeding. Even if you haven't made changes to the factory settings, creating a FACTORY.X2A is recommended since it causes less impact than a full factory reset when restoring your settings. Refer to the S90XS Owner's Manual for instructions on how to perform this procedure. It is also recommended that you have the latest firmware in your synthesizer before installation.

Installing the entire Piano Realism Pack will store new voices into USER4. There will be new performances in the first 16 positions of USER4, and new MULTIs in the first 16 positions of group "C".

To install the Piano Realism Pack, follow these steps:

1. Copy the PRP.X2A to a S90XS-compatible USB storage device using a computer.
2. Insert the USB storage device into the S90XS.
3. Press [FILE] button.
4. Use the [▶] button to select "Load" and press [ENTER].
5. Use the [▼] to select the USB storage device name (not "internal") and press [ENTER].
6. Select PRP.X2A and press [ENTER].
7. Select All and press [ENTER].
8. Press the [EXEC] soft button.

Note 1: After this installation procedure, the following MIDI settings, among others, may have changed from the settings that you had previously: Local Control, MIDI In/Out.

You can restore these settings by pressing the [UTILITY] button, followed by the [MIDI] soft button. Then press the [▲] and [▼] buttons and use the jog wheel to change the values as necessary.

You can also load individual voices, performances, and MULTIs as desired (Refer to the S90XS Owner's Manual for details).
